

## What's Happening Behind the Fence?

### **Deconstruction:**

The final phase will occur in 2015 when the new central plant is in operation.

### **Sitework:**

We continue with very little activity for the site work crews thru the winter and we look forward to an early spring so that work can continue on the hardscapes for the project! We hope that you enjoy Waterbury's Winterfest!

### **Historic Core:**

The structural framing work continues throughout the interior of the Historic Core. Interior spray foam insulation, wall framing and window installations are well underway. Mechanical, electrical and plumbing (MEP) rough-ins are also underway. We have begun to install our drywall and that really brings the new walls into focus!

### **New Office Building:**

The exterior masonry slate and granite stonework is nearly complete and it really does look great! The aluminum curtain wall and glazing work is underway as we have closed the building in for the winter. Interior framing and mechanical, electrical and plumbing (MEP) rough-ins are continuing as well. Drywall work begins this month!

### **Central Plant:**

The exterior wall framing, sheathing and roofing work is nearly complete as we are now closed-in for the winter! The large pieces of equipment for the biomass boiler system, the emergency generators and the centrifugal chillers are in place. The interior framing and drywall work as well as the MEP rough-in work is now well underway!

### **Safety:**

We are in our winter construction mode, so please be aware of changing conditions!

**Panoramic view (looking North) at New Office Building, Historic Core-South Buildings, Hanks, Weeks, DPS / Forensics and the New Central Plant!**
